JEPSON & CO LTD
FIRST IN NUMBER PLATES
Est. 1894

The changes in a nutshell:

- BS AU 145e becomes mandatory in September 2021.
- Between now and 31st August, you can supply BS AU 145d or BS AU 145e plates.
- We'll support you and help you become compliant.
- It is the outlet's responsibility to comply with the latest rules.
- Jepson & Co's acrylic plate construction is already compliant and PlateSync® software is 'e' ready (when online).

How are Jepson & Co supporting you with this change?

- **Your Sales & Support Manager will be in touch with you in the coming months to help you transition.**
- Our PlateSync® software is 'e' ready once you've downloaded the latest update and are online.
- Our acrylic plate construction has been independently certified as BS AU 145e compliant, well in advance of September's deadline.

What are the key changes to number plates?

The new standard, BS AU 145e, brings the following changes:

- plate durability has been improved thanks to a new abrasion test
- two tone digits are no longer allowed, digits must be a solid black colour
- the plate must show the new standard mark BS AU 145e from September, this may mean your artworks, plate sizes and borders need changing to comply with the updated rules.

The new standard aims to make number plates more secure and long-lasting for all UK vehicles.
